## HW1 SUBMISSION

Run your HW1 solution with "input.txt" as the command line argument. "input.txt" is our case file.

In the Visual Studio skeletons, the command line argument is already specified (under `Project > Properties > Configuration Properties > Debugging > Command Arguments` ). On OSX/Linux, this can be done by running `./transforms input.txt` in the homework directory. The skeletons already have the "input.txt" file in the correct location.

Once the program starts, press `i` and the program will automatically output all the required images (such as "input.txt.001.png"). Finally, add the images to a zip archive "screenshots.zip" and submit this zip archive. Partial submissions are allowed, but you will only receive credit for the images you submit.

Submit a zip file named `screenshots.zip` containing some or all of the following files:

- input.txt.000.png
- input.txt.001.png
- input.txt.002.png
- input.txt.003.png
- input.txt.004.png
- input.txt.005.png
- input.txt.006.png
- input.txt.007.png
- input.txt.008.png
- input.txt.009.png
- input.txt.010.png
- input.txt.011.png
- input.txt.012.png
